Introduction

Angry IP Scanner is a very fast IP and port scanner. It can scan IP addresses across any range, as well as their ports. The tool is cross-platform and lightweight; it does not require installation and can be copied and used anywhere.

Angry IP Scanner works by sending a ping to each IP address to check whether it is active, and it can optionally resolve the host name, determine the MAC address, scan ports, and more. The amount of information gathered for each host can be extended through plugins.

Comparison With Other Tools

The Tool	Function	Ease of Use	Features	Speed	Supported Platforms	Cost
Angry IP Scanner	A network scanner that checks active IP addresses and scans ports	Simple to use	IP address, open ports, hostname, MAC address, and report export	Fast	Windows Linux Mac OSX	Free
Nmap	open source utility for network discovery and security auditing it scans hosts, open ports/services, and can fingerprint operating systems	Moderate to difficult	used in penetration testing, vulnerability assessment, and incident response	Fast	Windows Linux Mac OSX	Free
Advanced IP Scanner	Discovers devices/IPs, shows shared folders, and enables remote management	Simple, user-friendly interface	Fast network scans with device info, remote control, report export, and Radmin integration	Fast	Windows	Free
SuperScan	Scans hosts to find open TCP/UDP ports and running services	Simple GUI; quick to start	Port scan, ping/traceroute, banner grab, WHOIS and Windows enumeration	Very fast	Windows	Free
Wireshark	A network packet analyzer is a specialized tool that captures and displays all data packets traversing a network connection, offering the ability to examine the contents of each packet in full detail	Quick and Simple	Open source, Supports multiple export formats	Speed is packet dependent	Windows Linux MacOS	Free

SoftPerfect Network Scanner	Scans network devices and services to show connected hosts and open ports.	Easy to operate	Includes remote access, device info, port detection, and data export.	Very fast	Windows, Linux, Mac OS	Paid (with trial)
Masscan	High performance Internet scanner	Moderate	High speed port scanner	Fast	Windows Linux	Free

Usefulness of This Tool

- 1- Network inventory: Quickly discover devices on your network (PCs, printers, cameras, IoT)
- 2- Troubleshooting aid: See which hosts respond to ping and whether service ports are open.
- 3- Basic security check: Run an initial scan to spot unauthorized devices/services in your range (only scan networks you're permitted to).

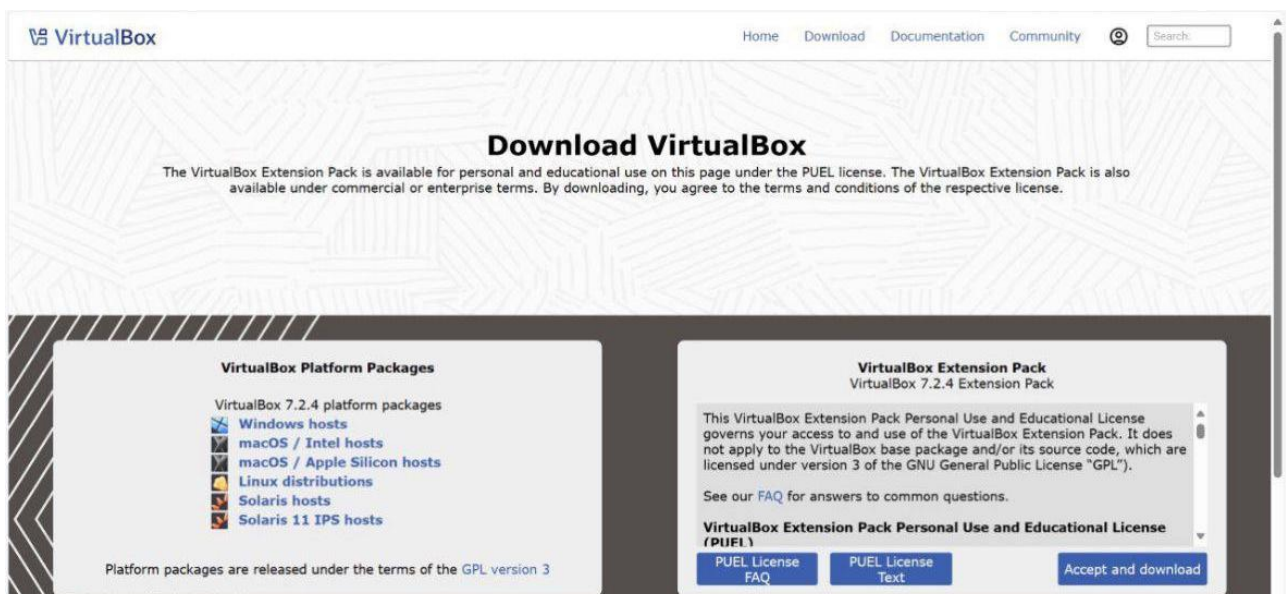

Requirements for Installation

- Network .
- Operating System : Windows .
- Requires 64-bit .
- File compression using ZIP .

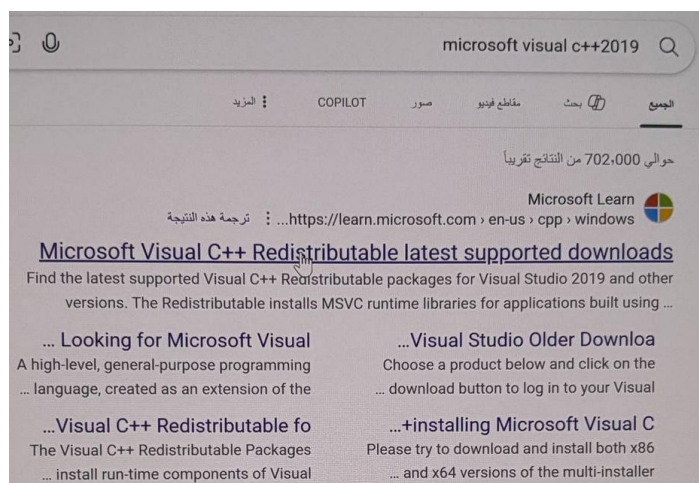

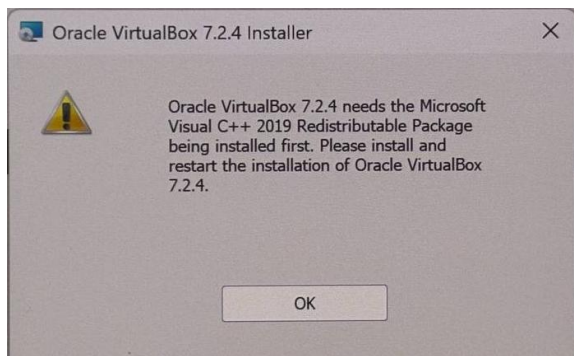

Installation Steps

1. Download VirtualBox :

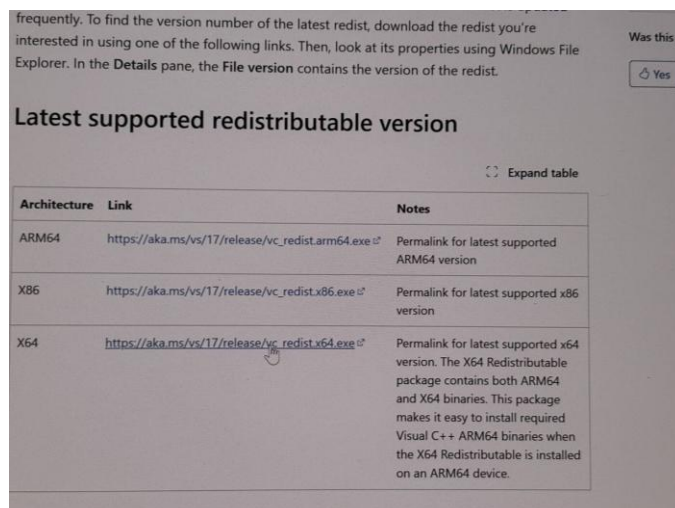

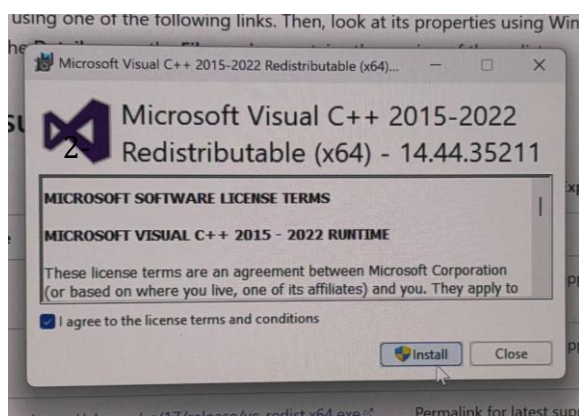

- Search for VirtualBox on Google and download the Windows version from the official website.

- During the installation of Oracle VirtualBox 7.2.4, a message requested installing the Microsoft Visual C++ 2019 Redistributable, so we searched for it on Google.

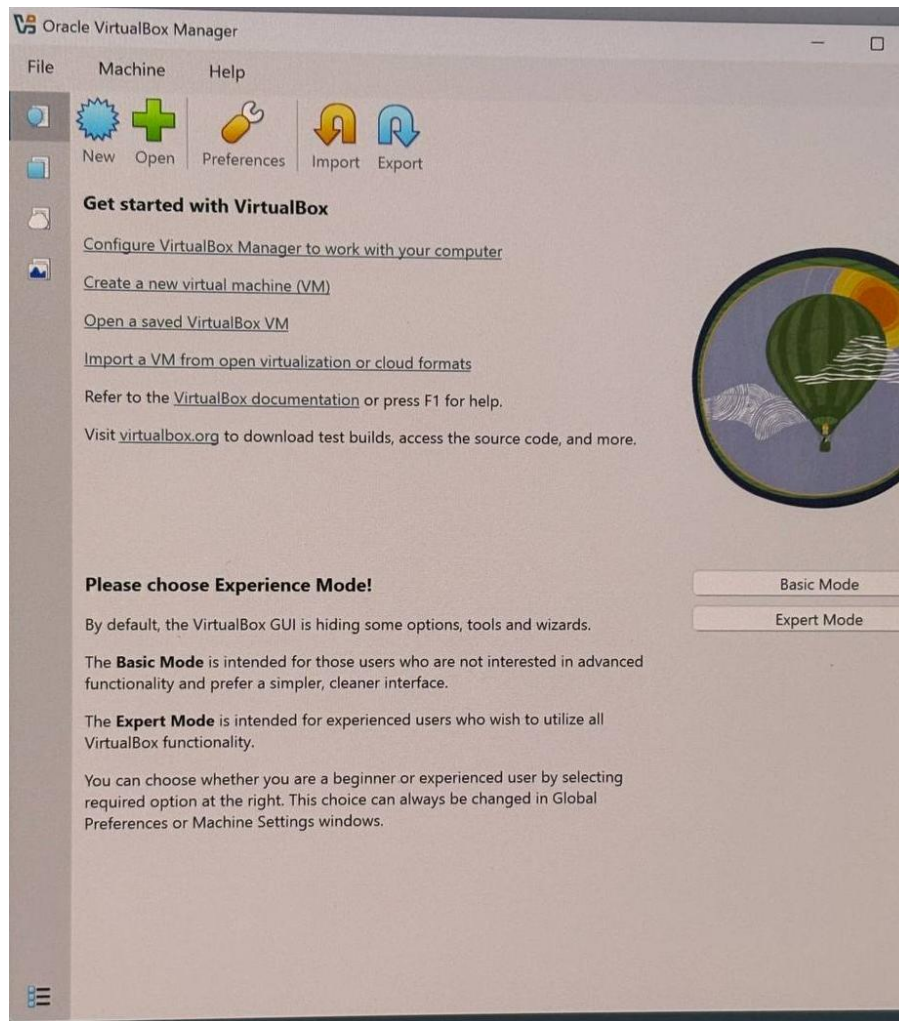

- Download the Microsoft Visual C++ 2019 Redistributable from the official website.

- Install the VirtualBox program.

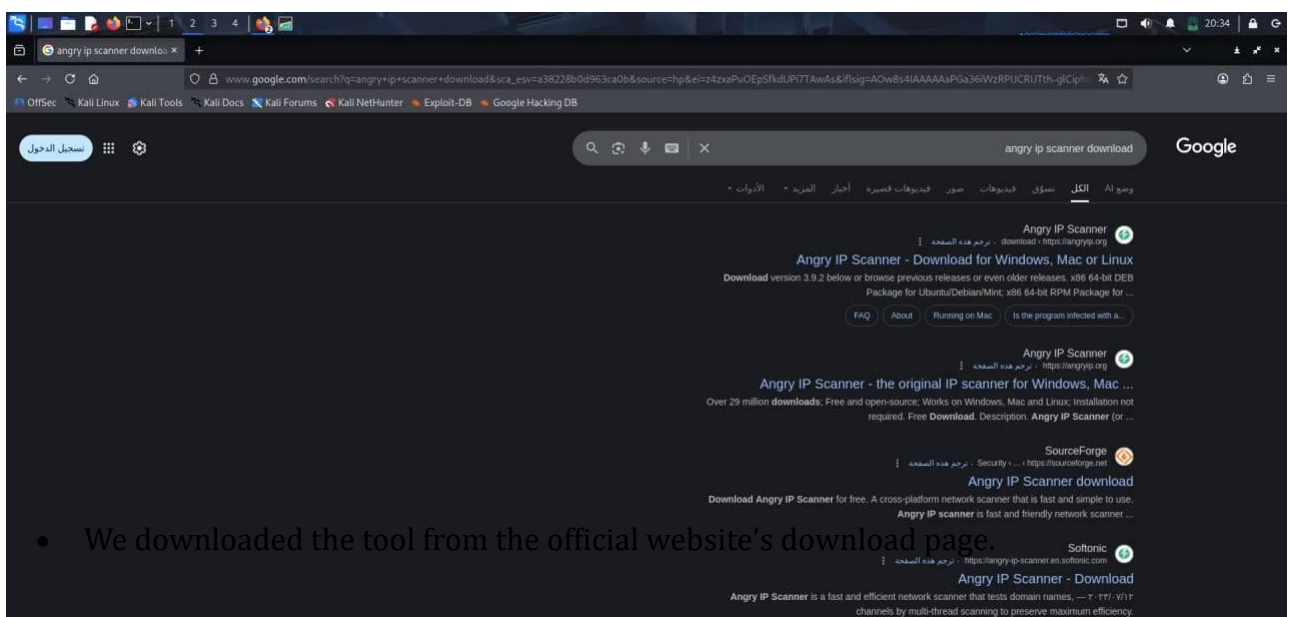

- Run and install the VirtualBox program.

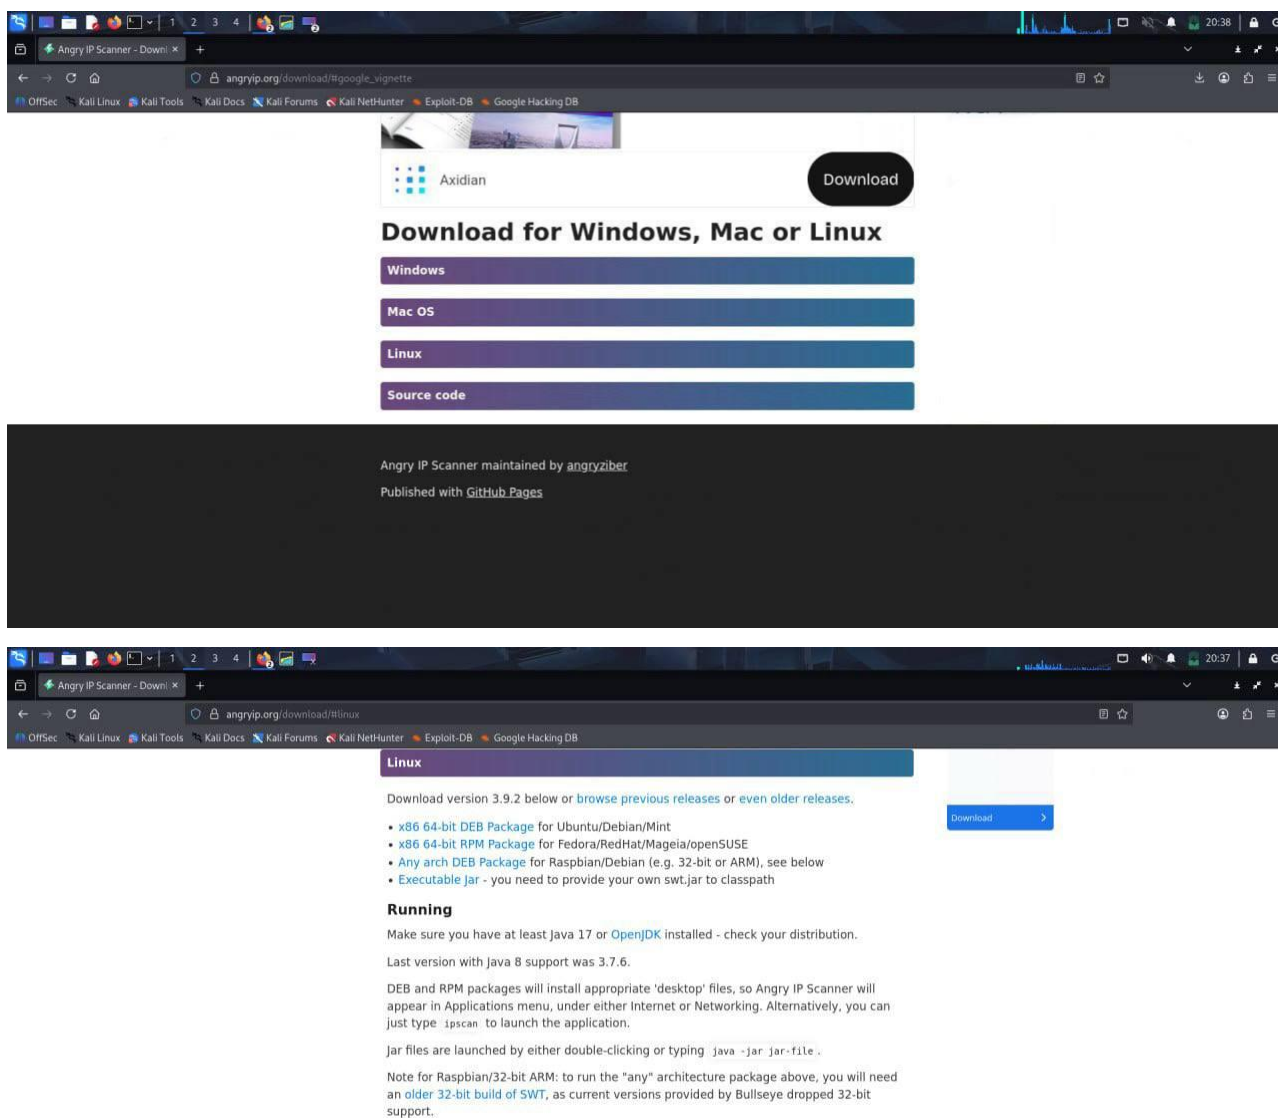

2- Download the Angry IP Scanner tool :

- We search Google for the tool name “Angry IP Scanner.”

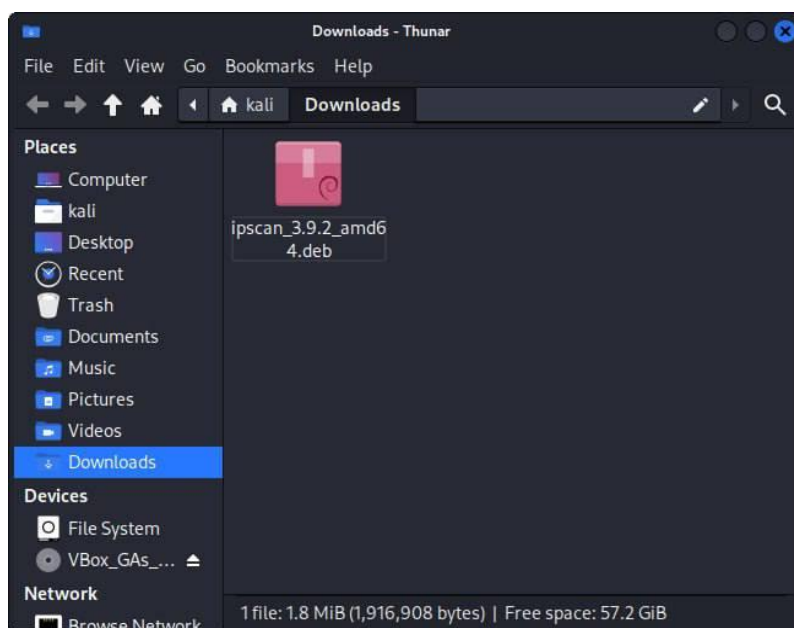

- We downloaded the tool from the official website’s download page.

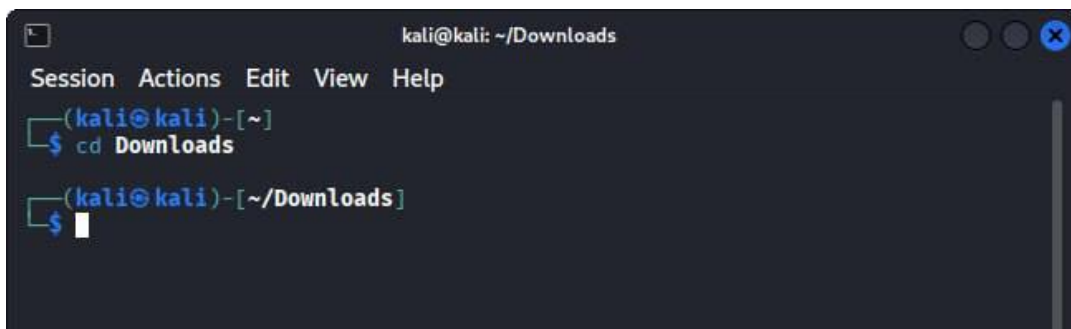

- Download the Angry IP Scanner tool from the official website.

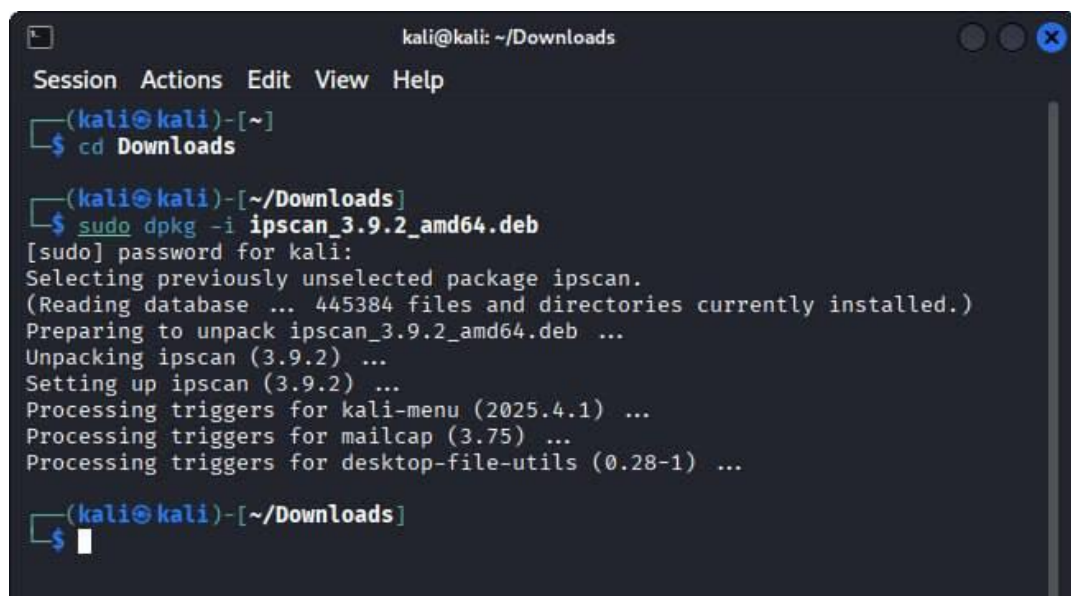

- We saved the file in the Downloads folder.

- Open Terminal in Kali Linux , Write the following commands (using the Angry IP Scanner filename): `cd Downloads` , `sudo dpkg -i ipscan_3.9.2_amd64.deb` (this is the filename).

```
kali@kali: ~/Downloads
Session Actions Edit View Help
(kali@kali)-[~]
$ cd Downloads
(kali@kali)-[~/Downloads]
$
```

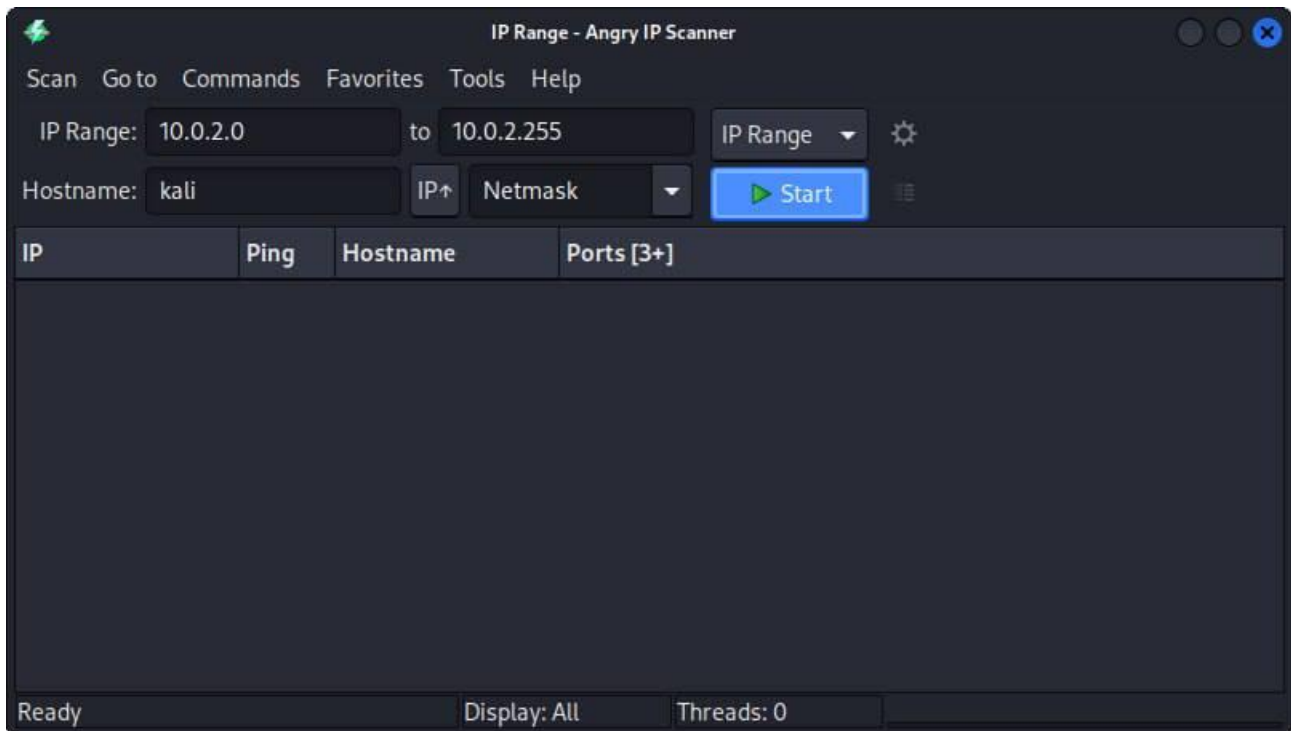

```
kali@kali: ~/Downloads
Session Actions Edit View Help
(kali@kali)-[~]
$ cd Downloads
(kali@kali)-[~/Downloads]
$ sudo dpkg -i ipscan_3.9.2_amd64.deb
[sudo] password for kali:
Selecting previously unselected package ipscan.
(Reading database ... 445384 files and directories currently installed.)
Preparing to unpack ipscan_3.9.2_amd64.deb ...
Unpacking ipscan (3.9.2) ...
Setting up ipscan (3.9.2) ...
Processing triggers for kali-menu (2025.4.1) ...
Processing triggers for mailcap (3.75) ...
Processing triggers for desktop-file-utils (0.28-1) ...
(kali@kali)-[~/Downloads]
$
```

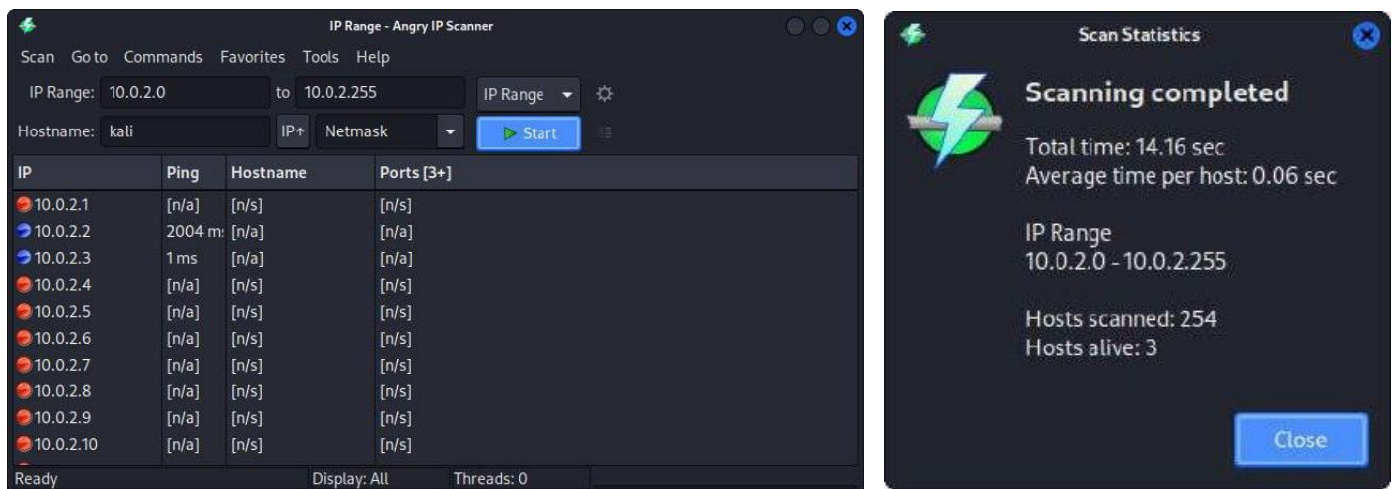

- Searching for the tool in Kali Linux.

- Angry IP Scanner's interface.

Results of Using This Tool

- The local network was scanned using Angry IP Scanner within the range 10.0.2.0 – 10.0.2.255, covering 256 IP addresses.
- A total of 254 hosts were attempted during the scan.
- The results showed that only 3 devices were active on the network, while the rest did not respond to ping requests.
- The program used color codes to indicate device status:
 - Red:** Inactive devices
 - Blue:** Connected devices with no open ports
 - Green:** Connected devices with open ports

- The total scan time was 14.16 seconds, with an average of 0.06 seconds per host.
- Some hosts did not display hostnames.
- The ping time reflected each device's response speed on the network.

Who can benefit from the tool

1- Network / Systems Administrators :

Used for device inventory, service availability checks, and detecting unauthorized hosts on the network.

2- Penetration Testers / Security Teams :

Used for reconnaissance and identifying vulnerabilities essential for penetration testing.

3- Helpdesk / IT Support :

Used for quick troubleshooting by checking active hosts and open ports.

Challenges Faced

- Transferring images from the isolated environment to the Windows system.
- Compressing the file and downloading a ZIP program.
- During the installation of Oracle VirtualBox 7.2.4, a message appeared indicating that the Microsoft Visual C++ 2019 Redistributable Package must be installed before proceeding with the installation.
- The isolated environment requires a large amount of storage.
- Setting up the virtual system is difficult for beginners.

Recommendations

- Download only from the official site
- Do not scan networks you don't own or don't have explicit permission to scan
- Run as administrator/root to get deeper info (MAC, hostnames)
- Lower the thread count on sensitive networks to avoid load
- Scan specific ports (e.g., 22, 80, 443) instead of all ports
- Export results and keep logs for review
